

High Lift Harness

This is made from nylon webbing 40-50 mm wide and stitched using nylon thread.

The breast band is double width to spread the load.

The size of a donkey will vary according to the available grazing so an adjuster is used with each yoking to ensure the harness is a good fit.

Inter Row Weeder

This tool is made from scrap car springs carefully ground and welded to provide the optimum angle of approach for good penetration.

Mould Board Plough

This is no longer used by hand as a dig for the fever in the moist ground. The same is sold
